3. Utah Nonagricultural Reporting Units and Payroll Employment by Firm Size, Planning District and County, First Quarter 1989 33

INTRODUCTION

Employment and wage data for Utah firms presented in this publication are categorized by number of individuals employed during March of designated years. Grouping Utah employers by this criterion provides useful data to analyze employment statistics. For example, general trends of firm size by geographic region and industry can be identified, as can wage rate levels by employment size and industry.

In this publication, the number of reporting units in Utah is different from the number of actual firms. The term "reporting unit" is used to identify a firm, an organization, a division, or an establishment whose employment data are maintained separately by the Utah Department of Employment Security.

Beginning in the first quarter of 1980, employment and wage data have been maintained separately by industrial activity and worksite location. However, for some industries, such as construction and mining, mobility of employment prohibits establishing permanent worksites. Data for these industries can only be maintained at a county level. In Utah, approximately 2,200 firms are multiple worksite employers, comprising close to 10,000 worksite units. As a result, the number of reporting units used in this publication is larger than the number of employers in Utah.

SECTION I

UTAH REPORTING UNITS EMPLOYMENT AND WAGES,
BY FIRM SIZE AND INDUSTRY
FOR FIRST QUARTER 1989

SECTION I

UTAH REPORTING UNITS EMPLOYMENT AND WAGES, BY FIRM SIZE

Every quarter, the Utah Department of Employment Security, collects and compiles employment and wage data from all non-agricultural employers in Utah. Data are collected at the individual establishment level; that is, for each individual store, plant, or permanent worksite facility. These individual establishments are called "reporting units." Since each reporting unit is assigned an industry and a county code, employment and wage data can be categorized into industry and county classifications.

During the first quarter of every year, reporting unit statistics were summarized into nine groups. These categories are based on employment levels and are 0-3 employees, 4-9, 10-19, 20-49, 50-99, 100-249, 250-499, 500-999, and 1,000 and over. Because Utah's employers are made up of many small-sized firms and relatively few large ones, the number of firms within a size category and the size category are inversely related. In fact, over one-half of Utah's employers employ fewer then four workers, and 99.4 percent employ fewer than 250 workers.

The distribution of the number of employed individuals among these nine categories is considerably different from the number of firms in these categories. Over one-half of the number of firms are in the smallest size category (employing 0-3 workers), but only 5.7 percent of total non-agricultural employment is found in this same classification.

Actually, the highest employment levels are concentrated in the middle-sized categories and the largest grouping (employing 1,000 and over). The three middle classifications (employing 20-249 workers) contain over 45 percent of total non-agricultural workers, and the largest group contains 49 percent.

With one exception, total wages within each size category show a pattern similar to that of employment. Although the largest percentage of total wages paid in Utah (20.0 percent) are in the largest employee-size category (employing 1,000 and over), a significant portion of total wages paid (43.5 percent) are found in the three middle size groups (employing 20-249 workers).

Average monthly wages appear to correlate with size category. Except for the smallest size group, average monthly wages increase in direct proportion to employment size groupings. This correlation, however, does not exist for all industries. For instance, Finance, Insurance, and Real Estate reports its highest average wage level in the sixth size category (employing 100-249 workers), and Trade and Services industries show their highest level in the first size group (employing 0-3 workers). Although most industries demonstrate a direct relationship between employment size and average wage level, this correlation does not appear in the Government sector.

*Prior to 1980, employment and wage data for each firm were separately maintained for each county and/or industry of operation. Effective with 1980, data for each firm are maintained at the individual worksite level. As a result, the 1980 Reporting count is inflated relative to earlier years, and growth comparisons would therefore not be valid. Also, a number of firms previously categorized in the larger size categories are now broken down by worksite and fall accordingly into smaller size groups.
